# FOREWORD

Trevor, Karen and the team welcome you to the 11th Annual Sale of Rising 2 year old Bulls from Peters Angus.

What interesting times we are living in! We recognise this isn't the way that you nor us anticipated sourcing breeding bulls this year however this has created an opportunity to do things a little different.

We encourage you to please visit the

website [www.bidr.co.nz](http://www.bidr.co.nz) , speak to your stock agent or contact your respective vendor for a rundown on how the online auction will work.

It's been a busy year at Peters Angus. The stud cattle were moved to the home property, Clutha Downs in March 2019. Bounded by the Clutha River near Beaumont, we farm 1,500 hectares effective, flat to steep rising from 50m to 350m above sea level.

After 13 years with us Shane Carter has moved onto a new venture at the beginning of this year. We wish Shane well with his earthmoving business and thank him for his outstanding input into our business over the years. With that we welcome Justin Wallis as our Stud Manager and Manager at Clutha Downs. Justin and his family moved to Clutha Downs in January and have settled in well.

This year Peters Angus offers 22 Angus Bulls in our first line up at Clutha Downs. Our aim is to breed sound cattle of good temperament, structure, muscling and with good fertility. We endeavour to maintain our strong philosophy in challenging our cattle under normal commercial conditions so our clients can achieve optimum financial gains in their commercial businesses. The bulls have been tested for BVD and vaccinated but will still need their annual booster prior to mating.

We look forward to your continued support and hope you are all doing okay during these unusual and challenging times.

Cheers from **Trevor & Karen, Clayton & Jeannette, Morgan & Megan, Justin & Allana and the team**

INSPECTION AND ENQUIRIES WELCOME

***Peters Angus***

## CONDITIONS OF SALE

1. The sale will be conducted under the usual terms and conditions of the N.Z Stock and Station Agents Assn.
2. Each lot becomes the property of the purchaser at the fall of the hammer.
3. Although every care has been taken to ensure accuracy in compiling this catalogue no responsibility is accepted for any errors that may be included therein.
4. The vendors reserve the right to alter the order of sale at anytime.
5. No warranty will be given by the auctioneer with any lot, and as all lots are open for inspection prior to the commencement of the sale, the same will be sold with all faults if any. No compensation shall be made in respect of any fault or error of description of any lots; however the vendors reserve the right to make compensation to a buyer if it is the vendors wish.
6. Leave full and explicit instructions in regard to transport.
7. **Insurance:** The auctioneers can arrange insurance on any stock. An insurance rep will be present on the day.

# CONDITIONS OF SALE

## CONDITIONS FOR BULL AUCTIONS CONDUCTED LIVE AT A SALEYARD/ON FARM

All intending purchasers must register at the PGG Wrightson Ltd Livestock (PGW) sales office prior to the sale.

The New Zealand Stock & Station Agent's Association Conditions of Sale apply. These terms can be inspected at the registration desk and on the wall in the auction room.

PGW's Monthly Account Terms of Trade also apply to the extent deemed relevant by PGW. The current versions of PGW's Monthly Account Terms of Trade are also available online at:

**[www.pggwrightson.co.nz\Our-Company\Terms-and-Conditions](http://www.pggwrightson.co.nz/Our-Company/Terms-and-Conditions)** or in hardcopy on request.

On behalf of the vendor, PGW will pay a purchasing rebate of 6% of the purchase price excluding GST, plus GST, to livestock companies and recognised independent livestock agents with a PGW Monthly Account who have introduced buyers to PGW before the sale and/or accompanied buyers to the sale.

## CONDITIONS FOR BULL AUCTIONS CONDUCTED ON bidr®

All intending purchasers must register online at **[www.bidr.co.nz](http://www.bidr.co.nz)** prior to the sale.

bidr®'s Conditions of Sale and Terms of Use apply. These terms can be inspected at

**<https://bidr.co.nz/content/user-terms-conditions>**

PGW's Monthly Account Terms of Trade also apply to the extent deemed relevant by PGW. The current versions of PGW's Monthly Account Terms of Trade are also available online at:

**[www.pggwrightson.co.nz\Our-Company\Terms-and-Conditions](http://www.pggwrightson.co.nz/Our-Company/Terms-and-Conditions)** or in hardcopy on request.

On behalf of the vendor, PGW will pay a purchasing rebate of 6% of the purchase price excluding GST, plus GST, to livestock agents with a PGW Monthly Account that are also Accredited Agencies on bidr® where the buyer has registered on bidr® under that Accredited Agency.

# UNDERSTANDING EBVS

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These estimates are called Estimated Breeding Values (EBVs).

In the calculation of EBVs, the performance of individual animals within a contemporary group is directly compared to the average of other animals in that group. A contemporary group consists of animals of the same sex and age class within a herd, run under the same management conditions and treated equally. Indirect comparisons are made between animals reared in different contemporary groups, through the use of pedigree links between the groups.

EBVs are expressed in the units of measurement for each particular trait. They are shown as + ive or - ive differences between an individual animal's genetics difference and the genetic base to which the animal is compared. For example, a bull with an EBV of +50 kg for 600-Day Weight is estimated to have genetic merit 50 kg above the breed base of 0 kg. Since the breed base is set to an historical benchmark, the average EBVs of animals in each year drop has changed over time as a result of genetic progress within the breed.

The absolute value of any EBV is not critical, but rather the differences in EBVs between animals. Particular animals should be viewed as being "above or below breed average" for a particular trait.

Whilst EBVs provide the best basis for the comparison of the genetic merit of animals reared in different environments and management conditions, they can only be used to compare animals analysed within the same analysis. Consequently, NZ ANGUS BREEDPLAN EBVs cannot be validly compared with EBVs for any other breed.

Although EBVs provide an estimate of an animal's genetic merit for a range of production traits, they do not provide information for all of the traits that must be considered during selection of functional animals. In all situations, EBVs should be used in conjunction with visual assessment for other traits of importance (such as structural soundness, temperament, fertility etc). A recommended practice is to firstly select breeding stock based on EBVs and to then select from this group to ensure that the final selections are otherwise acceptable.

EBVs are published for a range of traits covering fertility, calving ease, milking ability, growth, carcass merit and feed efficiency. When using EBVs to assist in selection decisions it is important to achieve a balance between the different groups of traits and to place emphasis on those traits that are important to the particular herd, markets and environment. One of the advantages of having a comprehensive range of EBVs is that it is possible to avoid extremes in particular traits and select for animals with balanced overall performance.

**Calving Ease EBVs (%)** are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

**CE % Direct** = Direct Calving Ease - The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age.

**CE % Daughters** = Daughters' Calving Ease - The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age.

**Gestation Length EBV (days)** is an estimate of the time from conception to the birth of the calf and is based on AI and hand mating records. Lower (negative) GL EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.

**Birth Weight EBV (kg)** is based on the measured birth weight of progeny, adjusted for dam age. The lower the value, the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

**200-Day Growth EBV (kg)** is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

**400-Day Weight EBV (kg)** is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

**600-Day Weight EBV (kg)** is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

**Mature Cow Weight EBV (kg)** is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

**Milk EBV (kg)** is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

**Scrotal Size EBV (cm)** is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

**Days to Calving EBV (days)** indicates the fertility of the daughters of the sire. It is the time interval between the day when the female is first exposed to a bull in a paddock mating to the day when she subsequently calves. A negative EBV for days to calving indicates a shorter interval from bull-in date to calving and therefore higher fertility.

**Carcase Weight EBV (kg)** is based on abattoir carcass records and is an indicator of the genetic differences in carcass weight at the standard age of 750 days.

**Eye Muscle Area EBV (sq cm)** is calculated from measurements from live animal ultrasound scans and from abattoir carcass data, adjusted to a standard 400 kg carcass. This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 400 kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher EMA EBVs are expected to produce better-muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower EMA EBVs.

**Rib Fat and Rump Fat EBVs (mm)** are calculated from measurements of subcutaneous fat depth at the 12/13-rib site and the P8 rump site (from live animal ultrasound scans and from abattoir carcasses) and are adjusted to a standard 400 kg carcass. These EBVs are indicators of the genetic differences in fat distribution on a standard 400 kg carcass. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

**Retail Beef Yield EBV (%)** indicates genetic differences between animals for retail yield percentage in a standard 400 kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

**Intramuscular Fat EBV (%)** is an estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a 400 kg carcass. Depending on market targets, larger more positive values are generally more favourable.

**Docility EBV (%)** is an estimate of the genetic differences between animals in temperament. Docility EBVs are expressed as differences in the percentage of progeny that will be scored with acceptable temperament (ie. either "docile" or "restless").

# SELECTION INDEXES

There are currently two different selection indexes calculated for New Zealand Angus animals. These are Self-Replacing and AngusPure. Each selection index describes a different production/market scenario and relates to a typical commercial herd in New Zealand that is targeting the following specifications.

Index values are reported as EBVs, in units of relative earning capacity (\$'s) for a given market. They reflect both the short-term profit generated by a sire through the sale of his progeny, and the longer-term profit generated by his daughters in a self-replacing cow herd. More information is available on selecting animals using a selection index.

The Index values are derived using BreedObject technology. More information is available from the BreedObject web site.

**Self-Replacing Index (\$)** - Estimates genetic differences between animals in net profitability per cow joined for a self-replacing commercial herd, targeting the production of grass finished steers. Steers are assumed marketed at 525 kg live weight (280 kg carcass weight and 10 mm fat depth) at 16 months of age.

**AngusPure Index (\$)** – Estimates genetic differences between animals in net profitability per cow joined for a self-replacing commercial Angus herd, targeting the production of grass finished steers for the AngusPure programme. Steers are assumed marketed at 525 kg live weight (280 kg carcass weight and 10 mm fat depth) at 18 months of age with a significant premium paid for marbling.

Note that \$Index values for individual animals are sensitive to the assumptions used in the BreedObject analysis to calculate the selection index. More information is available on the weightings used in the New Zealand Angus Selection Indexes.

Self Replacing (SR) \$	AngusPure (AP) \$
+\$114	+\$134

## ACCURACY

Accuracy (%) is based on the amount of performance information available on the animal and its close relatives - particularly the number of progeny analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the "confidence level" of the EBV. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Even though an EBV with a low accuracy may change in the future, it is still the best estimate of an animal's genetic merit for that trait. As more information becomes available, an EBV is just as likely to increase in value, as it is to decrease.

Accuracy values range from 0-99%.

As a rule, animals should be compared on EBVs regardless of accuracy. However, where two animals have similar EBVs the one with higher accuracy could be the safer choice, assuming other factors are equal.

For further information please contact NZ Angus or BREEDPLAN.

## May 2020 TransTasman Angus Cattle Evaluation - Percentile Bands for all 2018 born animals

## GENETIC DEFECTS

Arthrogryposis Multiplex (AM), Neuropathic Hydrocephalus (NH), Contractural Arachnodactyly (CA), Developmental Duplication (DD) AM, NH, CA and DD are simple recessive gene defects, caused by the presence of a single pair of inherited genes. The red gene in Angus cattle is a common example of recessive inheritance – the gene must be present on both sides of the pedigree for full expression.

If a carrier sire and a carrier dam are mated, 25% of the progeny will be clear of the defect, 50% will be carriers, and 25% will be affected.

A DNA test has been developed to identify carrier animals so these defects can be eliminated from the breed.

After such DNA testing, you will be given one of two results;

**AMF, NHF, CAF or DDF** = tested free of the gene

**AMC, NHC, CAC or DDC** = tested carriers of the defect.

But, to assist with the identification of carrier animals (prior to DNA testing) a 'probability test' has been developed - using updated test results and animals' pedigrees, known as Geneprob. Geneprob will identify 'at risk' animals in the breed database and assign them a status for AMS, NHS, CAS and DDS as follows;

AMFU, NHFU, CAFU and/or DDFU

= free by pedigree inference, untested

MS %, NHS%, CAS% and/or DDS% = a suspected carrier

(% = level of suspicion) but un-tested.

Requires testing to validate true status.

AMF, NHF, CAF and/or DDF = tested free of the defect.

AMC, NHC, CAC and/or DDC = tested carrier of the defect.

These GeneProb analysis tests are performed every seven days.

Genotyping for these mutations should, with 100% accuracy, expedite elimination of these genes from the Angus population.

If you are unsure of any aspect of these genetic defects please don't hesitate to ring us directly or contact the AngusNZ on 06 3234484.

All bulls entered in this catalogue have a genetic status of Free or Free untested for the genetic defects mentioned above.

## ANGUSPURE PARTNER STUD

AngusPure NZ has teamed up with 89 Angus studs who share in our vision - to focus on the end consumer. This stud is proud to be named as one of them, and by using the finest genetics and implementing best management practice they can help you produce more premium quality Angus beef.

Only our AngusPure Partner studs display these devices in their sale catalogues. They indicate bulls endorsed by AngusPure NZ.

## **A** ANGUSPURE ENDORSED BULLS

AngusPure continues to endorse bulls for sale that are in the top 40% of the breed for AngusPure index. This index gives commercial farmers confidence that by using this selection tool, bulls are most likely to leave progeny with superior carcass quality and at the same time achieve desirable outcomes for self replacing herds, as the AngusPure index still rewards cattle with strong maternal attributes like calving ease, scrotal and growth, along with carcass weight. To qualify for the 'A' endorsement, bulls must meet a minimum AngusPure index of +\$143.

**These bulls will be => +\$143 for AngusPure index.**

## **A+** EXTRA ANGUSPURE ENDORSEMENT FOR MARBLING

In addition to the 'A', and to assist bull buyers who wish to select for more marbling we are rewarding those animals that are in the top 25% of the breed for AngusPure index and who also have their marbling EBV (IMF) in the top 50% as well. These bulls will be awarded an 'A+' endorsement. Marbling is one of the very highest eating quality attributes and is necessary in order to meet some of the highest premium requirements for our new program, AngusPure Special Reserve. To qualify for the 'A+' endorsement, bulls must meet a minimum AngusPure index of +\$158. They must also meet the minimum marbling requirement of +1.7 for IMF

**These bulls will be => +\$158 for AngusPure index and => + 1.7 for IMF EBV.**

AngusPure recognises the need to lift the amount of marbling in our New Zealand cow genetics, in order to fill the requirements of consumers going forward. Marbling has two critical components; genetics and feeding. Feeding on a rising plane of nutrition is vital but without the genetics these attributes will not be able to express themselves.

## ANGUSPURE PARTNER STUD - CLIENT BENEFITS

- Exclusive access to sell Angus cattle in the monthly AngusPure Cattle Sale, hosted by bidr®, New Zealand's leading online trading platform
- Access to the latest genetics and information needed to produce quality beef
- Receive The Monthly Rump, the AngusPure Partner's newsletter via email
- Support from AngusPure NZ
- Access to sponsor giveaways from Gallagher, Nufarm, Norwood, Zoetis, Allflex NZ and Rabobank

## DEVELOPMENTAL DUPLICATIONS DD

This latest identified genetic disorder in Angus Cattle has just been notified to Angus NZ members and so far there has not been time to test for this defect.

The DD gene mutation was discovered by Professor Jon Beever of the University of Illinois, who has been working on this issue over the past four years. This was in conjunction with Australian researchers who had been presented with deformed calves unrelated to any previous Genetic Defects.

In a nutshell, the board of Angus NZ is of the view that the best way of reducing DD, and in fact all other identified defects, is for Angus NZ Members to use GeneProb results and strategic DNA testing to **identify non-carriers as the preferred future parents**. An accurate diagnostic test to identify DD has been developed and which Angus NZ is working to secure for use here in the near future. The new DD mutation is not expected to be more than a short-term problem for breeders to deal with.

**Peters Angus** will be actioning all recommendations & rule changes made by the Board of Angus NZ, to best manage this latest defect.

# NOTES

# NOTES

## *Exclusive Bull Cover*

### ***What is Exclusive Bull cover?***

FMG has partnered with Angus NZ to offer comprehensive insurance cover from the fall of the hammer with this vendor. All bulls auctioned at this exclusive Angus NZ and FMG sale up to the value of \$50,000 will automatically be covered under FMG's Exclusive Bull cover for 14 days at no cost to the purchaser.

### ***Length of cover***

To extend cover for the specified bull beyond 14 days you need to tick Exclusive Bull cover 12 months on the Purchaser Instruction and Insurance Slip in this catalogue. The specified bull is then covered for the remaining period of 12 months. The premium is payable to FMG and is in addition to the purchase price of the bull. If you require an alternative cover period talk to an FMG representative.

### ***Your bull's value***

Any bull covered under this policy must be purchased for \$50,000 or less.

For any bull purchased over \$50,000 talk to an FMG representative.

### ***During the period of insurance, the specified animal is covered for:***

- Death or infertility as a result of accident, disease or illness.
- Transit.
- Theft.

### ***What we will pay***

Fair market value of your specified bull, less any amount you receive for the sale of the carcass, up to the amount shown on the insurance certificate.

### ***Disclaimer***

Please note this is only a summary of the product and is subject to our specific product documentation. For full details, you should refer to the policy document. You can get these documents, and any other information you need, from your FMG representative, by calling us or visiting our website.

## *Purchaser Instruction and Insurance Slip*

# WE'VE MADE BULLS MORE ATTRACTIVE.

14 days  
**FREE**  
cover

**6.5%**  
for 12  
months

The handsome beasts in this catalogue will look even more appealing on sale day, thanks to FMG – the country's leading rural insurer. With 14 days free Exclusive Bull Cover, they'll be automatically insured from the fall of the hammer, covering their transit and infertility. And you can keep that cover going for the remaining 12 months for just 6.5% of the purchase price, for bulls up to the value of \$50,000. So don't miss this chance to buy bulls covered by FMG. It's a mighty attractive offer.

Please note this is only a summary of FMG products and services and is subject to our specific product documentation. For full details, refer to the relevant policy wordings at [fmg.co.nz](http://fmg.co.nz)
