# WELCOME TO TURIROA

Our 2020 Sale was one to remember here at Turiroa with Lot 1 Turiroa Complete 18P250 selling for a record high for us to Oregon Angus for \$86,000. Only to then be out done by the next bull in the ring Turiroa Ragnar 18P224 selling for a NZ on farm sale record price of \$104,000 to Kaharau and Orere Angus. Both these bulls were sired by Turiroa Complete 16M013 who was used as a yearling. This bull sired seven bulls in the catalogue that averaged over \$33,000 each. A wonderful achievement by a yearling bull. It was also pleasing to see that good quality bulls were still very affordable for the commercial farmer with 24 selling for \$8000 or under, proving to be excellent value for money.

To offer flexibility for our clients we have incorporated BIDR into our on farm sale this year, allowing those who cannot make the sale to view and bid on line. However we still recommend viewing the bulls prior to the sale.

This sale will be hosted by bidr® ([www.bidr.co.nz](http://www.bidr.co.nz)) as a HYBRID auction, with online bidding and a live-stream available on sale

day, as well as the normal on-farm format. All intending ONLINE purchasers must register on bidr® in advance of the sale date, by visiting the website and using the "sign up" button, adding their contact information and nominating the agency they would like to purchase through and account held with that agency. Alternatively, purchasers can organise an agent from one of the agencies listed on bidr® to buy on their behalf. The bidr® team is always available to help purchasers get signed up and registered, and the HelpDesk is proudly managed in-house from the Waikato. Please call 0800 TO BIDR (0800 86 2437), or email [enquiries@bidr.co.nz](mailto:enquiries@bidr.co.nz) for assistance at any point. Alternatively, contact Caitlin Rokela, National Territory Manager, for any enquiries on 0274056156.

We have been breeding pedigree Angus Cattle for over 75 years and over this time our breeding philosophies have remained the same- To produce sound , functional, fertile and maternal cattle with constitution and excellent breed type. These cattle must have the ability to leave top class off- spring that can hit target

markets and weights sooner. Our cow herd is the measuring parameter for do-ability, survivability and longevity. They also measure temperament, udder quality and feed efficiency. The top profit drivers for beef cattle enterprises that you can control to MAXIMISE the amount of beef produced on your property therefore adding VALUE along the way not just at slaughter are :

- Stocking rate
- Pregnancy test rate
- Weaning rate
- Weaning weight
- Growth Rates

Our cattle have been selected for large scrotal size, produce vigorous calves that grow fast and dams that have superior milking ability for generations.

We are excited to present this years crop of Sale Bulls. Turiroa Nitro 17N122 and Turiroa Tyrant 14843 have done an outstanding job for us leaving natural meat and hindquarter in their sons -

something we feel is lacking in modern Angus today. The depth right through the catalogue is evident.

We have not chased breeding fads or latest trends. Instead using eye-appraisal and stockmanship first then incorporating this with the raft of EBVs we have available today.

Sale Bulls are grass fed. We do not feed crops to any of our cattle. All Bulls in this catalogue have been vet tested for penile soundness and morphology, BVD tested and vaccinated, 7 in1 vaccinated twice and are AMF, NHF, CAF and DDF pedigree free or tested free, TB status C10 and of course backed by our THREE year guarantee.

We are available anytime to discuss your bull requirements or let us know if you would like to come and view the bulls prior to the sale.

ANDREW AND TRACEY POWDRELL

# REPRODUCTIVE FERTILITY IN HERD BULLS.

The most important factor influencing the profitability of a beef cow operation is the percentage of the calf crop weaned. The herd bull influences overall herd fertility more than any other single animal.

Several factors influence a bull's fertility. A bull must be developed properly and have reached puberty to be fertile. Other determinants are social dominance, Libido, good nutrition as well as physical characteristics such as SCROTAL CIRCUMFERENCE and SEMEN QUALITY.

## SCROTAL CIRCUMFERENCE.

As scrotal circumference increases, so does the daily production of high quality sperm. There is a positive correlation between a sire's scrotal circumference, the scrotal circumference of his sons and the pregnancy rate of his daughters. Bulls with a larger scrotal circumference are likely to sire sons with large scrotals and his daughters are likely to reach puberty at younger ages and are more likely to be cycling at the beginning of the breeding season and are more likely to become pregnant earlier when compared with the off-spring of bulls with a small scrotal circumference.

All bulls scrotal measurement is an in - direct estimate of the mass of testicular tissue, which is directly related to sperm quantity and quality which is a measure of his capacity eg. Bull to cow ratio.

## SEMEN QUALITY.

Semen quality is determined by the volume of the ejaculate and by the MOTILITY and MORPHOLOGY of the sperm cells.

Sperm MOTILITY is calculated by evaluating the percentage of spermatozoa with forward movement in a sample ejaculate. Semen MORPHOLOGY is calculated by evaluating the number of normal spermatozoa in a sample ejaculate in relation to sperm with primary and secondary abnormalities. Semen MORPHOLOGY influences pregnancy rates therefore selection of bulls with better quality semen can help increase overall pregnancy rates in a herd.

**NOTE:** Turiroa has been selecting for large scrotal size for many years and have listed the individual Morphology of each bull catalogued. The standard is 75% or better for Morphology. Most Turiroa Bulls are consistently achieving well over this. Also included is actual scrotal size ( taken April 2021) and dams performance by way of calves born , eg 6/6 . (Six calves born from six matings etc.) in a simple easy to read box.

# BULL FERTILITY EVALUATION

## TURIROA ANGUS

The bulls listed in this catalogue have undergone a Fertility Evaluation on the 4<sup>th</sup> of May 2021 and have exceeded the minimum standards for the following parameters:

### PENILE SOUNDNESS

The extended penis shows no signs of injury or abnormality and is structurally sound

### SEMEN EVALUATION

A semen sample, collected with an electro-ejaculator, is examined microscopically and assessed for density, motility and shows no less than 80% normal morphology, well above the 75% minimum standard

Helen Taylor BVSc

Wairoa Farm Vets  
p. 06 838 3832  
m. 021 0414 026  
e. [helen@wairoafarmvets.co.nz](mailto:helen@wairoafarmvets.co.nz)  
w. [wairoafarmvets.co.nz](http://wairoafarmvets.co.nz)

### **PLEASE NOTE:**

- Accredited brucellosis and tuberculosis free herds.
- Strictly commercial orientated. Turiroa bulls are not overfed prior to sale.
- Sale bulls AA Inspected and fully guaranteed.
- Performance recorded & carcass scanned.
- Our cattle are freeze branded for easy identification.
- Over **75 years** in the business.
- **SEMEN**- Turiroa retains the right to take up to 200 straws of semen off any bull sold in this catalogue for in herd use only at our cost.

### **DELIVERY:**

Cartage will be paid by the vendor if uplifted within two weeks of the sale. South Island delivery paid by vendor to Feilding. Bulls may be held under exceptional circumstances by arrangement with vendor.

### **CONDITIONS OF SALE:**

The sale will be conducted with the Conditions of Sale of the Wairoa Stock and Station Agents' Association, a copy of which will be exhibited.

### **OVERSEAS PURCHASERS:**

All sales to overseas purchasers are on condition that the cattle pass all necessary tests required for entry into the purchasing country.

### **INSURANCE:**

Transit and Period Insurance are recommended and can be arranged with the Auctioneers.

### **PAYMENT:**

Due date for payment on all cattle sold at this sale is 14 (fourteen) days from the date of sale.

## **FERTILITY GUARANTEE**

All lots contained within this catalogue are covered by our 3 season warranty with regard to soundness and fertility. In the unlikely event that a bull should develop a fault that affects his ability to breed that is not covered by normal insurance we will refund to the purchaser a proportion of the purchase price depending on the length of service the bull has given. Namely two thirds of the purchase price after one year of service and one third after two years, minus the salvage costs of the bull. To be available as a credit on a replacement bull at the following sale or a suitable replacement offered if available.

### **The following conditions apply:**

- 1 That the purchaser shall throughout the guarantee period give the bull full and sufficient opportunity to prove that he is a good server and stock - getter of, to demonstrate his ability to get stock, whichever the case may be.
- 2 The Purchaser shall throughout the guarantee period assure that the bull has proper care and attention, and is maintained in good condition and health. Bull not to be disposed of unless for humane reasons.
- 3 Failure on the part of the purchaser to observe the foregoing conditions or any of them shall render the undertaking.

The cost of taking delivery or/and the returning a bull to the Vendor shall be borne by the Purchaser. A veterinary certificate will be required by the vendor.

# Proudly Servicing the East Coast

# TRANSTASMAN ANGUS CATTLE EVALUATION EBVS

## EBVS

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These estimates are called Estimated Breeding Values (EBVs).

In the calculation of EBVs, the performance of individual animals within a contemporary group is directly compared to the average of other animals in that group. A contemporary group consists of animals of the same sex and age class within a herd, run under the same management conditions and treated equally. Indirect comparisons are made between animals reared in different contemporary groups, through the use of pedigree links between the groups.

EBVs are expressed in the units of measurement for each particular trait. They are shown as +ive or -ive differences between an individual animal's genetics difference and the genetic base to which the animal is compared. For example, a bull with an EBV of +50 kg for 600-Day Weight is estimated to have genetic merit 50 kg above the breed base of 0 kg. Since the breed base is set to an historical benchmark, the average EBVs of animals in each year drop has changed over time as a result of genetic progress within the breed.

The absolute value of any EBV is not critical, but rather the differences in EBVs between animals. Particular animals should be viewed as being

"above or below breed average" for a particular trait.

Whilst EBVs provide the best basis for the comparison of the genetic merit of animals reared in different environments and management conditions, they can only be used to compare animals analysed within the same analysis. Consequently, TACE EBVs cannot be validly compared with EBVs for any other breed.

Although EBVs provide an estimate of an animal's genetic merit for a range of production traits, they do not provide information for all of the traits that must be considered during selection of functional animals. In all situations, EBVs should be used in conjunction with visual assessment for other traits of importance (such as structural soundness, temperament, fertility etc). A recommended practice is to firstly select breeding stock based on EBVs and to then select from this group to ensure that the final selections are otherwise acceptable.

EBVs are published for a range of traits covering fertility, calving ease, milking ability, growth, carcass merit and feed efficiency. When using EBVs to assist in selection decisions it is important to achieve a balance between the different groups of traits and to place emphasis on those traits that are important to the particular herd, markets and environment. One of the advantages of having a comprehensive range of EBVs is that it is possible to avoid extremes in particular traits and select for animals with balanced overall performance.

Calving Ease EBVs (%) are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

**CE % Direct = Direct Calving Ease** - The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age.

**CE % Daughters = Daughters' Calving Ease** - The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age.

**Gestation Length EBV** (days) is an estimate of the time from conception to the birth of the calf and is based on AI and hand mating records. Lower (negative) GL EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.

**Birth Weight EBV** (kg) is based on the measured birth weight of progeny, adjusted for dam age. The lower the value, the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

**200-Day Growth EBV** (kg) is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

**400-Day Weight EBV** (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

**600-Day Weight EBV** (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

**Mature Cow Weight EBV** (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

**Milk EBV** (kg) is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

**Scrotal Size EBV** (cm) is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

**Days to Calving EBV** (days) indicates the fertility of the daughters of the sire. It is the time interval between the day when the female is first exposed to a bull in a paddock mating to the day when she subsequently calves. A negative EBV for days to calving indicates a shorter interval from bull-in date to calving and therefore higher fertility.

**Carcase Weight EBV** (kg) is based on abattoir carcass records and is an indicator of the genetic differences in carcass weight at the standard age of 750 days.

**Eye Muscle Area EBV** (sq cm) is calculated from measurements from live animal ultrasound scans and from abattoir carcass data, adjusted to a standard **400 kg carcass**. This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 400 kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher EMA EBVs are expected to produce better-muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower EMA EBVs.

**Rib Fat and Rump Fat EBVs** (mm) are calculated from measurements of subcutaneous fat depth at the 12/13-rib site and the P8 rump site (from live animal ultrasound scans and from abattoir carcasses) and are adjusted to a standard 400 kg carcass. These EBVs are indicators of the genetic differences in fat distribution on a standard 400 kg carcass. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

**Retail Beef Yield EBV** (%) indicates genetic differences between animals for retail yield percentage in a standard 400 kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

**Intramuscular Fat EBV** (%) is an estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a 400 kg carcass. Depending on market targets, larger more positive values are generally more favourable.

**Docility EBV** (%) is an estimate of the genetic differences between animals in temperament. Docility EBVs are expressed as differences in the percentage of progeny that will be scored with acceptable temperament (ie. either "docile" or "restless").

## SELECTION INDEXES

There are currently three different selection indexes calculated for New Zealand Angus animals. These are Self-Replacing, AngusPure and Heifer/Dairy Terminal. Each selection index describes a different production/market scenario and relates to a typical commercial herd in New Zealand that is targeting the following specifications.

Index values are reported as EBVs, in units of relative earning capacity (\$'s) for a given market. They reflect both the short-term profit generated by a sire through the sale of his progeny, and the longer-term profit generated by his daughters in a self-replacing cow herd. More information is available on selecting animals using a selection index.

The Index values are derived using BreedObject technology. More information is available from the BreedObject web site.

**Self-Replacing Index** (\$) - Estimates genetic differences between animals in net profitability per cow joined for a self-replacing commercial herd, targeting the production of grass finished steers. Steers are assumed marketed at 525 kg live weight (280 kg carcass weight and 10 mm fat depth) at 16 months of age.

**AngusPure Index** (\$) – Estimates genetic differences between animals in net profitability per cow joined for a self-replacing commercial Angus herd, targeting the production of grass finished steers for the AngusPure programme. Steers are assumed marketed at 525 kg live weight (280 kg carcass weight and 10 mm fat depth) at 18 months of age with a significant premium paid for marbling.

**Heifer/Dairy Terminal Index** (\$) – Estimates the genetic differences between animals in net profitability per female joined in an example herd where all progeny are marketed. All progeny are marketed at approximately 510 kg live weight (280 kg carcass weight and 7 mm fat depth) at approximately 24 months of age.

Note that \$Index values for individual animals are sensitive to the assumptions used in the BreedObject analysis to calculate the selection index. More information is available on the weightings used in the New Zealand Angus Selection Indexes.

## ACCURACY

**Accuracy** (%) is based on the amount of performance information available on the animal and its close relatives - particularly the number of progeny analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the “confidence level” of the EBV. The higher the accuracy value the lower the likelihood of change in the animal’s EBV as more information is analysed for that animal or its relatives. Even though an EBV with a low accuracy may change in the future, it is still the best estimate of

an animal’s genetic merit for that trait. As more information becomes available, an EBV is just as likely to increase in value, as it is to decrease.

Accuracy values range from 0-99%. The following guide is given for interpreting accuracy:

See the Table BELOW.

ACC RANGE	INTERPRETATION
less than 50%	EBV should be considered as a preliminary estimate. It could change substantially as more performance information becomes available.
50-74%	Medium accuracy, usually based on the animal’s own records and pedigree. Still subject to substantial changes with more information, particularly when the performance of progeny are analysed.
75-90%	Medium - high accuracy and includes some progeny information. Becoming a more reliable indicator of the animal’s value as a parent.
more than 90%	High accuracy estimate of the animal’s true breeding value. It is unlikely that the EBV will change much with the addition of more progeny data.

As a rule, animals should be compared on EBVs regardless of accuracy. However, where two animals have similar EBVs the one with higher accuracy could be the safer choice, assuming other factors are equal. For further information please contact NZ Angus or TACE.

# Heritabilities of Traits in Angus Group TACE (TransTasman Cattle Evaluation)

Only part of the variation that we observe among animals is due to genetic differences. The majority of the variation is generally due to non-genetic factors such as differences in environment and nutrition.

The degree to which genetic differences influence performance varies from trait to trait. This is explained by differences in the “heritability” of the traits.

Growth and carcass traits tend to have moderate to high heritabilities (i.e. 20 to 60%), whilst maternal traits have low heritabilities (10% or lower).

Angus TACE takes into account the different degrees of heritability of various traits, and the known genetic relationships between the traits.

-  The amount of genetic influence in a trait.
-  The amount of environmental (non-genetic) influence in a trait.

## VISUAL APPRAISAL IS STILL VERY IMPORTANT FOR SELECTING BULLS

---

- **MASCULINE TRAITIS** - A strong head, jaw and thick neck indicate high levels of libido, testosterone and reproductive efficiency.
- **NECK LENGTH** - A thick necked animal matures and reaches puberty earlier and has more libido. A longer neck indicates a higher maintenance animal that is slower to reach puberty and rebreed.
- **HEART GIRTH** - Larger heart girth is an indicator of vigor and easy keeping ability. Small heart girth animals are more susceptible to stress, are higher maintenance and do not perform well.
- **STRUCTURAL SOUNDNESS** - Feet and bone- Hill country cattle cover large distances over rugged terrain so a strong skeleton is essential.
- **REPRODUCTIVE** - A tight sheath, good sized and shaped testicles are essential.
- **FLANK** - Deep flanked animals are easier keeping, have more meat in the rump and have more maternal and reproductive efficiency. Higher flanked animals tend to be higher maintenance and take longer to finish on grass.

## LOOKING AFTER YOUR NEW BULL

1. Run your bull with a steer or cow as a companion.
2. Handle them quietly and don't rush them
3. Young bulls are still growing, so fresh feed and a little hay will maintain their growth pattern and help them to settle in.
4. Turiroa bulls are accustomed to being handled by Stockmen on horses and motorbikes and with dogs.
5. When the season is finished, the bull should be drenched and put away on good feed. Adequate feed will help stop fighting and help the bulls settle into their groups

## INDEPENDENTLY INSPECTED

**ALL BULLS IN THIS CATALOGUE  
HAVE BEEN INDEPENDENTLY  
INSPECTED**

This Inspection service is offered by Angus New Zealand to breeding members as a form of quality assurance and indicates that the animal has passed inspection **on the specific day it was viewed**. The inspection is carried out by an approved Angus NZ Inspector, and animals of a minimum age which **pass** this inspections may assume an "Independently Inspected" status and may be promoted under the associated Angus NZ "Independently Inspected / AA Tick" logo (attached).

Inspections are carried out in accordance with the Angus NZ Inspection Manual 2011.

## O.S.H.

Under the Occupation Health and Safety Act 1992 we are required to advise people of possible hazards.

1. Cattle Movements
2. Vehicles and Machinery
3. Cattle Yards: - Slippery Surface
4. Pavilion: - Seating

First of the `Nitro` sons and a cracker! Look at the round muscle in him! Tremendous hindquarter, width of Loin and super sound. He has a nice spread of EBV's, trait leader for scrotal and rock solid pedigree. The `Completes` were stand outs last year. 19Q338 has a very similar pedigree to Turiroa Ragnar 18P224. Stud Potential.

34kg	292kg	474kg	675kg

First of the `Outlander Sons`. Outlander was purchased with Rangatira Angus and was the highest priced bull sold in NZ that year. 342 has a lovely head, back end, a massive volume bull. Big scrotal means fertility plus!

Powerhouse Bull with terrific depth and substance and a great pedigree to match. A good one! Possesses a lot of attributes that are being lost in the modern Angus.

# Premier Bull cover

## ***What is Premier Bull cover?***

All bulls auctioned at this sale up to the value of \$50,000 will automatically be covered under FMG's Premier Bull cover for 14 days at no cost to the purchaser.

## ***Length of cover***

To extend cover for the specified bull beyond 14 days you need to tick Premier Bull cover 12 months on the Purchaser Instruction and Insurance Slip in this catalogue. The specified bull is then covered for the remaining period of 12 months. The premium is payable to FMG and is in addition to the purchase price of the bull.

If you require an alternative cover period talk to an FMG representative.

## ***Your bull's value***

Any bull covered under this policy must be purchased for \$50,000 or less. For any bull purchased over \$50,000 talk to an FMG representative.

## ***During the period of insurance, the specified animal is covered for:***

- Death or infertility as a result of accident, disease or illness.
- Transit.
- Theft.

## ***What we will pay***

Fair market value of your specified bull, less any amount you receive for the sale of the carcass, up to the amount shown on the insurance certificate.

## Purchaser Instruction and Insurance Slip

This slip MUST be completed and handed to the Booking Clerk before leaving the sale.
